2	ai generated	AI	Autumn Echoes	Jul 23, 2026 · 5:09 PM
3	section locked	Human	Locked verse_1	Jul 23, 2026 · 5:09 PM
4	human edit	Human	These are English lyrics in the test son	Jul 23, 2026 · 5:09 PM

Transparency Statement

This Creative Passport is produced by HarmonyLedger — a provenance and authorship system for AI-assisted creative work — and documents the collaborative process between a human creator and a generative AI model (Google Gemini). It records the creative process and preserves an auditable history of human-AI collaboration. It may be attached to a song submission, sync-licensing application, or rights-body registration to provide a transparent contribution accounting. **IMPORTANT:** Contribution percentages are a transparent accounting model based on recorded creative actions. They are not a legal determination of copyright ownership. Contribution figures are computed deterministically from an append-only event log that records every action taken during the project — by the human creator and by the AI — in the order they occurred. No contribution figure is hand-entered or estimated after the fact; each number is a direct arithmetic result of the logged record. Methodology v1 is in use for this export. Section authorship is derived from the provenance state each song section carries at the time of export. A section marked `human_written` is attributed 100% to the human creator. A section marked `ai_generated` — meaning the AI produced it and the creator accepted it without textual change — is attributed 100% to the AI. A section marked `ai_then_human` — meaning the AI produced a draft that the creator then edited — is attributed 50% to each party. The headline human/AI percentage shown on this passport is the average of those per-section attributions across all sections present in the song. The Direction Score measures creative steering: every deliberate human decision logged in the timeline (locking a section, requesting a regeneration, accepting or rejecting an AI draft, making a direct edit) is counted as a human-direction event. The Direction Score is the ratio of those events to all timeline events, expressed as a percentage. A higher Direction Score indicates that the creator exercised more active editorial control over the AI's output. The full event log, including events omitted from the printed timeline for readability, is retained in the project's source data file and is available for independent audit on request.
